

# Manage Your Waste

**Overview:** India generates 62 million tonnes of mixed waste each year. About 43 million tonnes (70%) are collected, of which about 12 million tonnes are treated, and 31 million tonnes are dumped in landfill sites. Mixed waste in landfill releases methane which catches fires, it also releases leachate and thereby pollute air, water and soil. So it is very essential to segregate waste at source and send the waste for correct end disposal.

**Objective:** To create awareness among the audience about different types of waste, waste segregation and waste management.

**Content:** An Interactive session on types of waste, its effect on health and environment and its safe disposal

**Duration:** 60 minutes

**Audience:** Company employees/ School students and staff/ Residential Society Members

**Outcome:**

Proper management of waste and safe disposal of waste by company/school/residential.
