

Managing Your E-waste

Overview: India generates about 2 million tonnes of e-waste annually, however only 1.8% is recycled. Of the total e-waste recycled, 95% is recycled by the informal sector in a crude manner. E-waste contains toxic metals like lead, mercury which if ill managed can affect the health of the human as well as cause environmental pollution.

Objective: To create awareness among the audience about electronic waste and its responsible management.

Content: An Interactive session on types of e-waste, its effect on health and environment and its safe disposal

Duration: 60 minutes

Audience: Company employees/ School students and staff/ Residential Society Members

Outcome:

- Disposal of e-waste by company/school/residential society through an authorized e-waste recycler only.
